

Teething Calendar

Timeline and order of 20 primary teeth

The order in which baby teeth appear is not an accident. Each tooth comes through in its own time. **Print the calendar** and **write the eruption date** of each of your baby's teeth.

1	Lower incisors	(6-10 MONTHS)
2	Upper incisors	(7-12 MONTHS)
3	Lower lateral incisors	(7-16 MONTHS)
4	Upper lateral incisors	(9-13 MONTHS)
5	Primary lower molars	(12-18 MONTHS)

6	Primary upper molars	(13-19 MONTHS)
7	Primary upper canines	(16-22 MONTHS)
8	Primary lower canines	(16-23 MONTHS)
9	Secondary lower molars	(20-31 MONTHS)
10	Secondary upper molars	(25-33 MONTHS)

As a parent, you know when your baby is teething.
